THE COMPANY

PortaPower was founded in 1995 with a mission of manufacturing and marketing high quality rechargeable batteries and related products to the customers worldwide. with its headquarter in Hong Kong, it has sales and administration, R&D offices, laboratories and factories in Hong Kong, China and Canada. The company has world-wide staff size of about 2000. Its factories in Shenzhen and Panyu is ISO 9001 certified, and have a total production

capacity of over 1,000,000 standard battery units per month. It offers approximately three thousand product models for customer's selection. PortaPower manufactures replacement batteries and related accessories and also develop and produce OEM items according to customer's requirements. Its products bear some of the world's most prestigious brands, including Duracell®, Energizer®, Rayovac® and others.

PortaPower has highly efficient production and assembly lines with the most modern equipment, like in-house machine tooling, injection welding lines and CNC mould production producing workshops, to ensure the timeliest response to rapidly changing market needs. And, PortaPower invests heavily on research and development. Its experienced R&D teams keep PortaPower in the forefront of rechargeable battery technology.

Among PortaPower's leading products are rechargeable battery packs for notebook computers, camcorders and digital cameras. The Li-ion cells used in these battery packs are procured from the most reputable manufacturers in Japan, Korea and China.

We have insured all our battery and charger products with a 2 million US Dollars (US\$2,000,000) world-wide product liability insurance.

Matching original OEM laptop battery design, our laptop batteries also have Secondary Safety Protection Circuit.

PRIMARY PROTECTION CIRCUIT

Senses the voltage level and disable the charge circuit after a predetermined voltage level is exceeded for a specified time period. In the event that the cell voltage exceeds its maximum level, the cell can enter a thermal runaway condition where the cell temperature can exceed 125°C. At this temperature the cell may explode and erupt into flames.

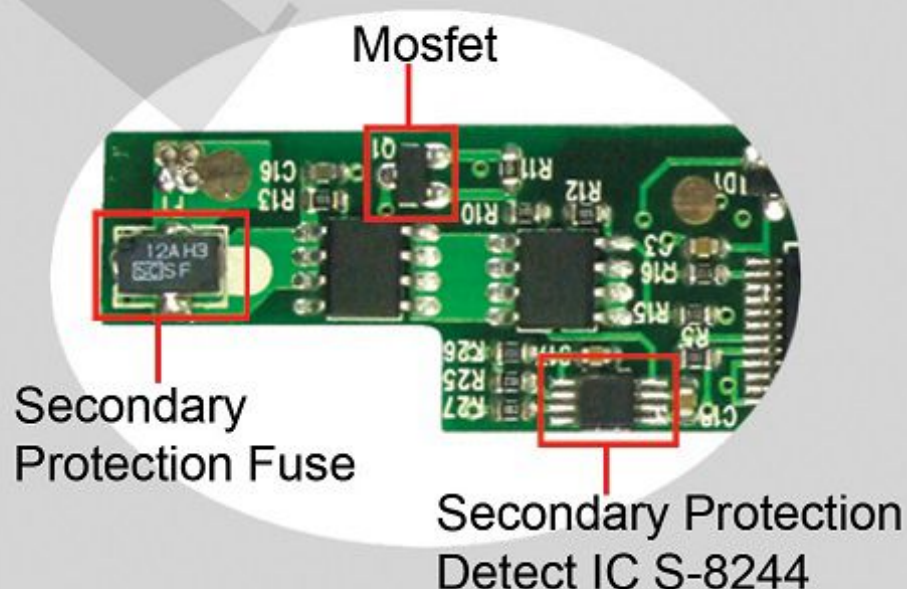

SECONDARY PROTECTION CIRCUIT

With Thermal and Current Fuse, to prevent over-voltage, short circuit and thermal runaway conditions in the event the Primary Protection Circuit does not operate properly.

Flame Test For Our V0 Grade Plastic Specimen

All our Digital Camera and Camcorder battery casings are made with flame-retardant UL 94, V0 grade plastic materials

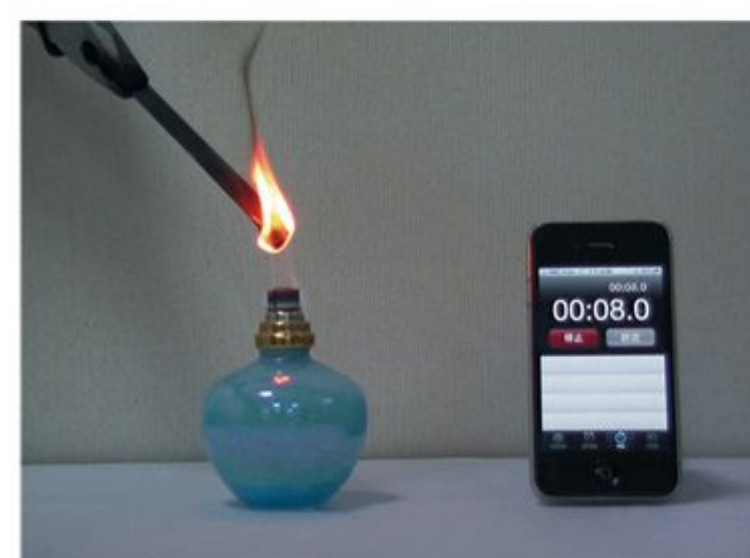

What is UL 94?

UL 94 is a plastic flammability standard released by Underwriters Laboratories of the USA. The standard classifies plastics according to how they burn in various orientations and thicknesses.

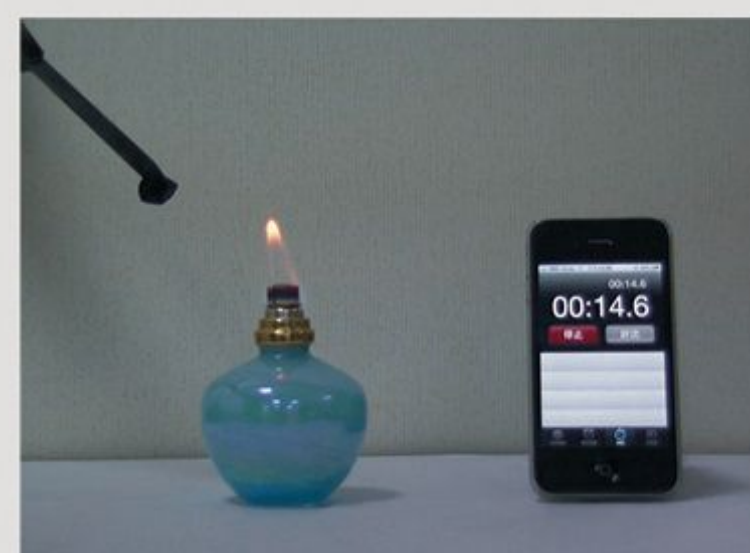

What are the requirements of V0 grade?

If the plastic specimen reach V0 grade, they must:

- Specimen must not burn with flaming combustion for more than 10 seconds after either test flame application.
- Total flaming combustion time must not exceed 50 seconds for each set of 5 specimens.
- Specimen must not burn with flaming or glowing combustion up to the specimen holding clamp.
- Specimen must not drip flaming particles that ignite the cotton.
- No specimen can have glowing combustion remain for longer than 30 seconds after removal of the test flame.

Specimen burns for 10 seconds

Specimen moves away from the flame, the burning plastic specimen flame extinguishes within 5 seconds
